

Walk in bath

Before you buy, consider the points below

- It is advisable to discuss your bathing need with an Occupational Therapist; a bath lift in your existing bath may be a better solution.
- Walk In Baths replace your existing bath; they have a door in the side and an integral seat. It is advisable to try one before you buy as; door handle can be very stiff as they need to create a seal, the step in can be difficult to negotiate, integral grab rails may not be in a convenient position, the seat may be too low for standing and as you are in an upright seated position, you will not be able to stretch out.
- You will need to consider if the bath with a door will still meet your needs if you become less mobile.
- Buying from a locally established company with a showroom should ensure you can try before you make a decision to buy.
- Ask for a free site survey with no commitment to purchase.
- Ask the supplier to confirm in writing that the bath will fit into your bathroom.
- Ask supplier to confirm in writing that doorway and corridor widths are adequate for delivery.
- Ask the supplier to confirm in writing that your water pressure and tank capacity is adequate for the bath to fill.
- Ask the supplier how long the bath will take to fill and empty. It should take no more than 2-5 mins to fill and 1½-2 mins to empty. You will be in the bath as it fills and empties and as the water cools you will need to ensure your bathroom is warm enough.
- Ensure the cost quoted includes installation and any extra costs
- Ask for a written guarantee that includes faults during and after installation, including leaks.
- Check the after sales service, repairs, maintenance including seal replacement when required.

Prices start at about £2000 plus fitting.
