

Ecological Consultants / Contractors and Geological Consultants Working In the Devon Area

When employing a consultant you are recommended to consider the following:

- ***Their knowledge of the local area / locality***

Ecologists who have knowledge of the local area are better able to; assess the implications of the scheme in relation to local context, make contact with local wildlife organisations, and undertake survey work and attend meetings.

- ***Tenders and detailed written proposals***

It is always advisable to seek, for comparative purposes, several written quotes / tenders which include details of the work the ecological consultants would undertake and a summary of relevant experience and licences (e.g. for bat roost visits and dormice and great crested newt surveys). *Please also check that the consultant is experienced in submitting reports for planning applications.*

- If your application only involves works to a building or structure then you may wish to employ a specialist in bats and birds.

This document is divided into sections to help in your search for a consultant/contractor:

1. Ecological Consultants based in Devon:
 - East / Mid Devon area
 - Exeter area
 - Teignbridge District / South Devon area
 - North / West Devon area
2. Aquatics, intertidal and marine consultants
3. Ecological Consultants based in the 'South West'
4. Geological Consultants
5. Hedge Translocation Contractors
6. Japanese Knotweed Contractors

If you would like to find alternative consultants we recommend that you visit the Chartered Institute of Ecology and Environmental Management (CIEEM) website – <http://www.cieem.net/> - or telephone 01962 868626.

If you are a consultant in the South West and would like to be added to this list, or any details need amending, please email sarah.jennings@devon.gov.uk.

Note that the following list is supplied without prejudice and does not imply any guarantee of quality of work. This list is not definitive.

ECOLOGICAL CONSULTANTS BASED IN DEVON

Ecological consultants dealing with terrestrial protected species/ habitat/general surveys required for planning applications

Note: Consultants are listed based on their office location, but will typically work anywhere within the county.

East / Mid-Devon based

Acorn Ecology Ltd

Gerard Edwards Ltd.

Geological resources have been the basis of my professional career for over 30 years. My approach is that of resource management in identifying the assets of a site and how they can be best used for minerals, site re-use and for education. A significant amount of my work has been at the interface between minerals, waste and other developments where the basic geology is a start point for many diverse interests in a project.
