

Health and Wellbeing Outcomes Report

Report of the Director of Public Health

Recommendation: It is recommended that the Devon Health and Wellbeing Board note the updated Health and Wellbeing Outcomes Report.

1. Context

This paper introduces the current detailed outcomes report for the Devon Health and Wellbeing Board, which monitors the priorities identified in the Joint Health and Wellbeing Strategy for Devon 2013-2016.

2. The Health and Wellbeing Outcomes Report

2.1 An 'updates only' version of the Health and Wellbeing Outcomes Report for June 2016 is included separately. The report is themed around the four Joint Health and Wellbeing Strategy priorities, and includes breakdowns by local authority, district, clinical commissioning group, inequalities characteristics and trends over time. The updated indicators are:

- Teenage Conception Rate, 2014
- Hospital Admissions for Self-Harm Aged 10 to 24, 2014-15
- Alcohol-Related Admissions, 2015-16 Q3 (narrow and broad definitions)

2.2 There were 211 conceptions in Devon during 2014 for females aged under 18, with around half leading to a birth. The latest rate (17.1 per 1,000 females) was significantly below South West (19.4), local authority comparator group (20.4) and England (23.3) rates. Within Devon rates are lowest in Northern and Western Devon and the South Hams. Rates have dropped significantly in recent years.

2.3 There were 736 hospital admissions for self-harm in persons aged 10 to 24 in Devon during 2014-15. The rate per 100,000 in Devon (565.1) was above the South West (537.9), local authority comparator group (436.2) and England (398.8) rates. Rates have increased in recent years.

2.4 Using the narrow definition of alcohol-related admissions covering more immediate harm, the direct age standardised rate of admissions (611.4 per 100,000) was below South West (630.4) and England local authority comparator group (627.5) and England (640.5) rates. Using the broad definition of alcohol-related admissions covering longer-term impacts of alcohol, the direct age standardised rate of admissions (1792.8 per 100,000) was below the South West (1963.2), local authority comparator group (1968.8), and England (2150.3) rates.

2.6 Figure 1 provides a summary of all indicators in the outcomes report, and includes a RAG rating, trend and comparison chart.

2.7 Figure 2 summarises the outcomes against the four themes of the Devon Joint Health and Wellbeing Strategy 2013 to 2016.

2.8 Figure 3 compares Devon to the local authority comparator group for all indicators, highlighting whether outcomes are significantly better or worse than the comparator group and England rates. It also shows Devon's rank within the local authority group (1 is best and 16 is worst), both currently, and in 2013 to highlight change over time.

Table 2: Priority Area Summaries, June 2016

Priority	Summary
1. A Focus on Children and Families	Child poverty levels continued to fall in 2013. Recorded levels of child development are above the South West and England averages. Rates of smoking at delivery are falling over time and are amongst the lowest in the South West. Conception rates have fallen sharply, particularly in more deprived areas. Self-harm admissions in younger people are above the national average.
2. Healthy Lifestyle Choices	Higher levels of physical activity are seen in Devon. Levels of excess weight in children are above average at age 4/5 and below average at age 10/11. The narrow alcohol-related admissions rate is similar to England. Adult smoking rates are below the national average. Mortality rates are falling.
3. Good Health and Wellbeing in Older Age	Clostridium Difficile incidence aligns with South West and national rates. The gap between Devon and the South West and England for the detection of dementia has narrowed significantly. Devon has relatively low levels of injuries due to falls. A higher proportion feel supported to manage their long-term condition in Devon. Reablement service effectiveness is above average, but recorded coverage is low. Readmission rates are below average but are increasing over time.
4. Strong and Supportive Communities	Suicide rates in Devon are consistent with the national average. There is a smaller gap in life expectancy between the most and least deprived communities in Devon than nationally. Self-reported wellbeing in Devon tends to be better than the national average. The proportion stating that they have as much social contact as they would like is below the national average. Quality of life for carers is in line with the national average. Devon had lower levels of people with learning disabilities in stable and appropriate accommodation than the national average, but higher rates for people with mental health issues.

6. Public Health Impact

The Devon Health and Wellbeing Outcomes Report is an important element of the work of the board, drawing together priorities from the Joint Health and Wellbeing Strategy, and evidence from the Joint Strategic Needs Assessment. This report and the related documents have a strong emphasis on public health and other relevant health, social care and wellbeing outcomes. A number of the outcomes indicators are also drawn from the Public Health Outcomes Framework. The report also includes a specific focus on health inequalities.
