Overview
 Low happiness score is one of four self-reported wellbeing measures in the Public Health Outcomes Framework, with others covering life satisfaction, feeling worthwhile and anxiety. Within Devon, 7.70% of the population had a low happiness score (ranked 0-4 on a scale of 10) on the index compared with 8.36% for the South West, 8.10% in the local authority comparator group and 8.75% in England overall.

Equalities
 No local information is available based on area deprivation or other characteristics. National findings highlight that self-reported wellbeing tends to be poorer in more deprived areas. There is a notable pattern by age with younger people and older people with higher levels of wellbeing than people in their 40s and 50s (known as the U shaped curve of happiness).
