Overview

The Slope Index of Inequality compares life expectancy in the most deprived and least deprived communities within an area's population, revealing the gap in life expectancy in years. For males in Devon the gap is 5.9 years which is significantly lower than the gaps for the South West (7.7), and England (8.2).

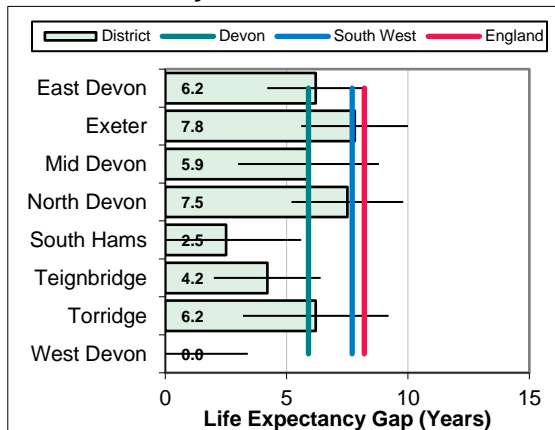

Equalities

As the slope index of inequality compare the most and least deprived communities within an area's population, the smaller gap seen is partly a product of less severe social inequalities compared to other areas. The gap is more notable at the extremes with a 15 year gap in life expectancy at an electoral ward level. The life expectancy gap is much larger for males than females.
